Who we are

We are Copenhagen Optimization and we intend to push modern software techniques and technologies into the stale world of enterprise airport software. Our Better Airport product suite is dedicated to revolutionize the way data-analysis and optimization is used to help airports utilize their current and future operational capacity.

Established in 2014, Copenhagen Optimization is still a young company, we can already see our client base growing rapidly all over the world. Therefore, we are looking for more software engineers to join our team. Our team consists of experienced developers and business consultants and you will be working closely together with both, in an agile and fast-moving environment in Copenhagen.

Our Why: To passionately innovate and optimize, so that together we enable tangible, lasting improvements for people globally.

Who you are

You might come straight from university with a high level of dedication and eager to use your newly acquired skills. Maybe you have previous experience working in a software development team, while you were studying and now you are ready to leave the nest and start your own career full-time. Maybe one of the big consultancy companies snatched you out from university, and you have been thrown from one project to another feeling bad about leaving an unmaintainable mess for the next consultant to handle. Maybe you just love building stuff that has the potential to change the lives of others. Maybe you even have a preferred Linux distro!

Either way, you have experience with or is interested in working with full-stack tech, know the pros and cons of object oriented and functional programming, and what the

COPENHAGEN OPTIMIZATION

difference is between NoSQL and SQL. You have strong opinions, and are not afraid to say them out loud. You are curious by nature and being a good listener is important to you. You believe that the best solutions come from collaboration.

Your level of communication is high, and your written and verbal skills in English are very strong. Most of the team speak Danish too, but is not required.

Most importantly, you are keenly interested in learning and being a productive part of a team.

_____
